

Trace Covid-19

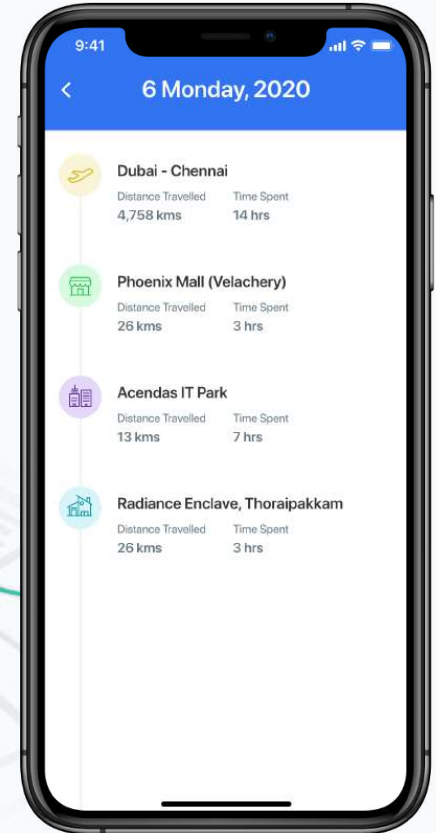

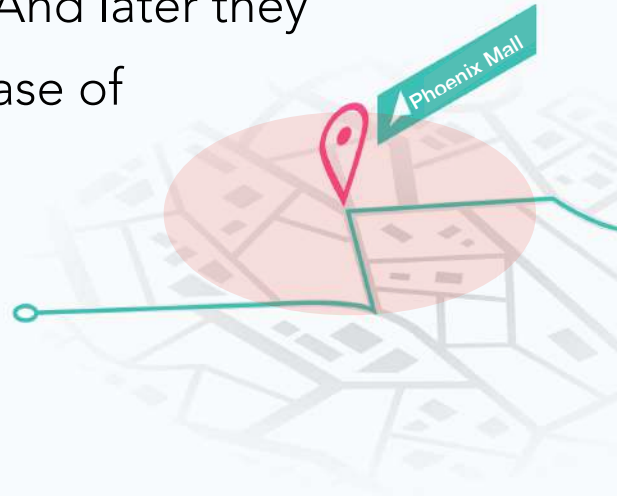

App Development Proposal

 MacAppStudio

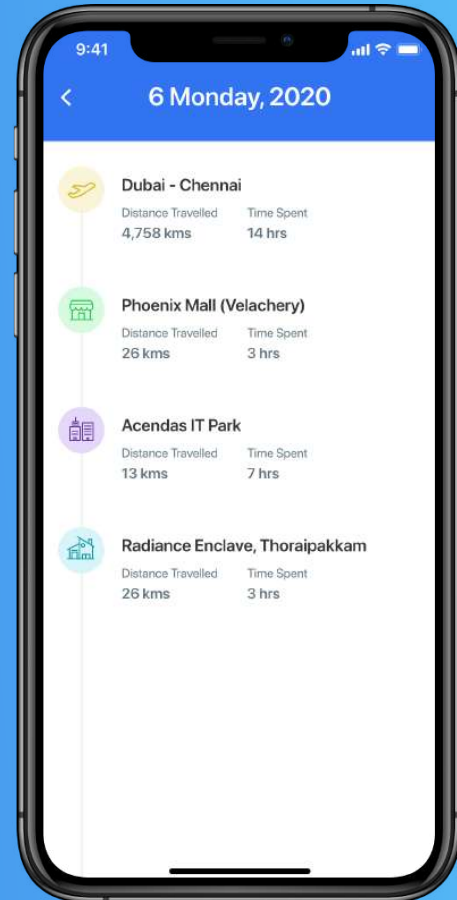

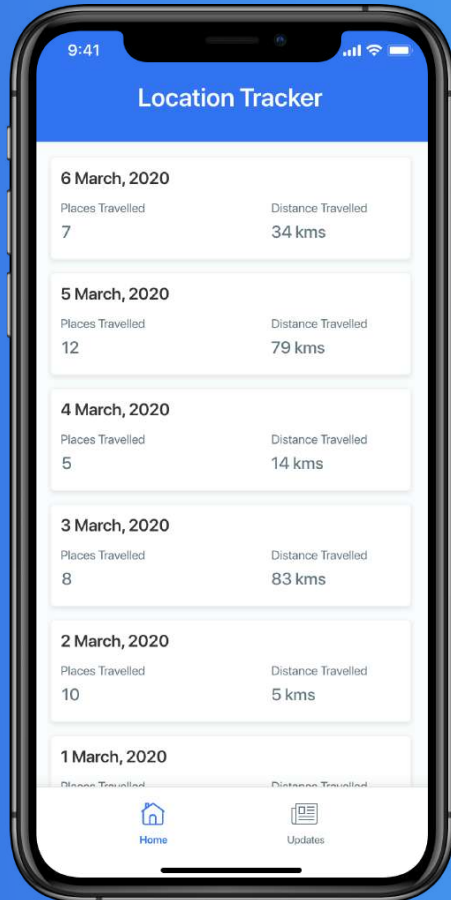

www.macappstudio.com

Trace Covid-19 App

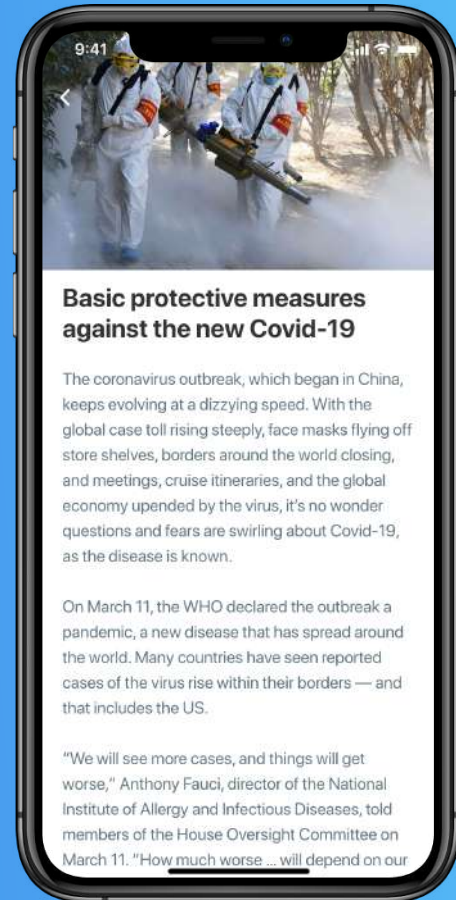

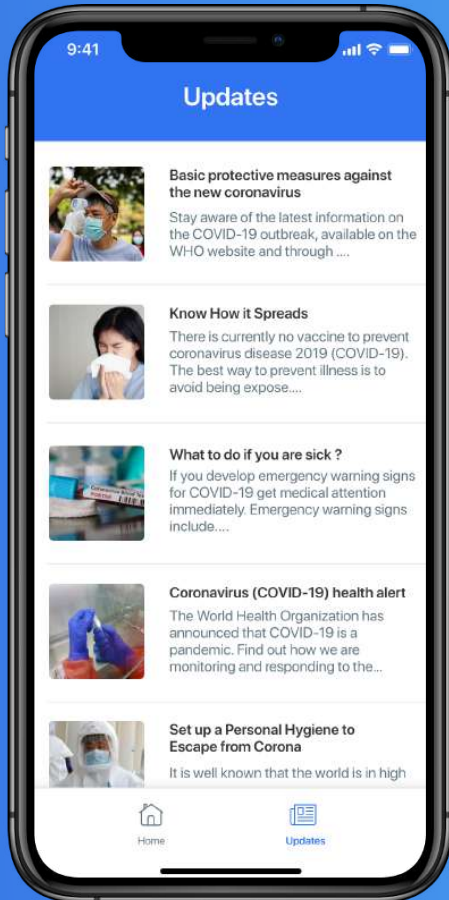

Simple App which tracks the people Geo-location and collects details of people around him/her, And later they can be used in-case of Covid-19 impact.

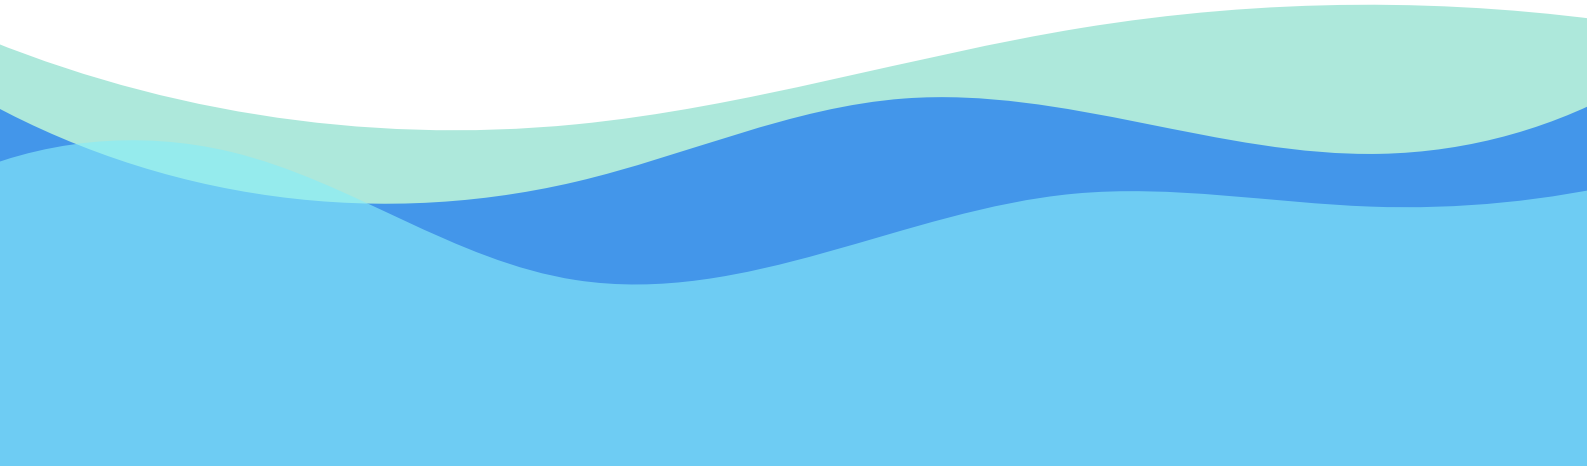

Trace Covid-19 App

Trace Covid-19 App

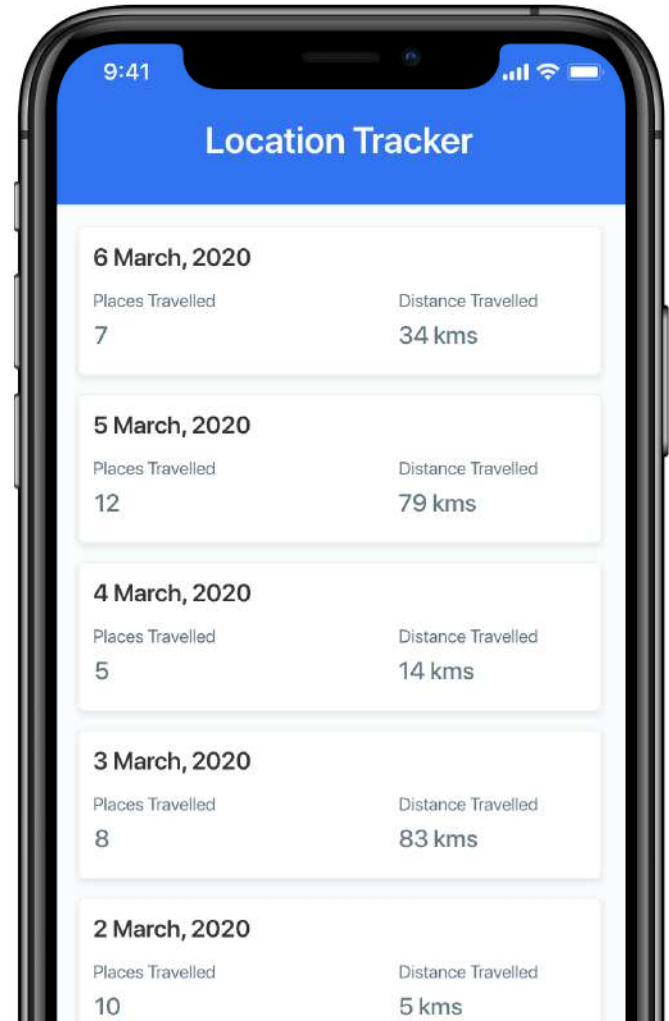

How it Works?

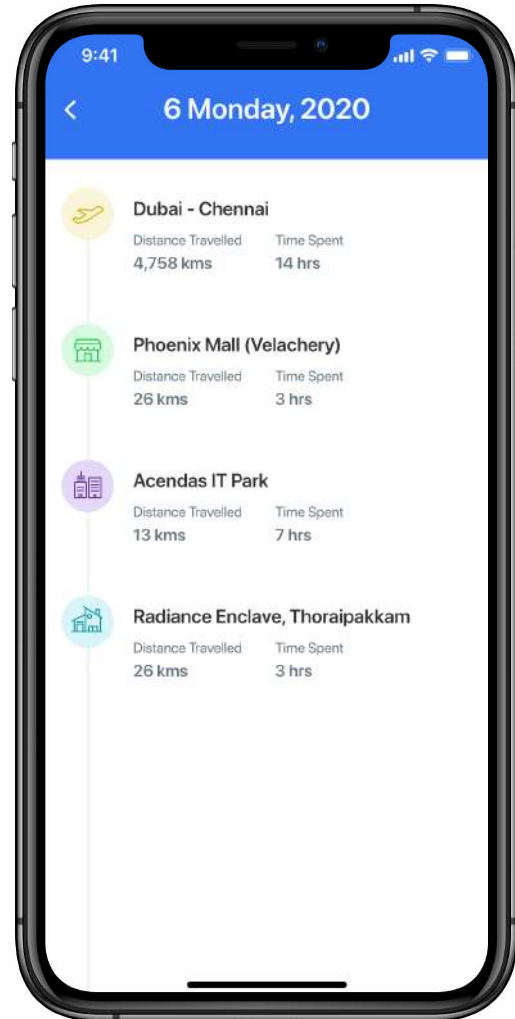

Location Tracker

Live monitoring of cellular infrastructure.

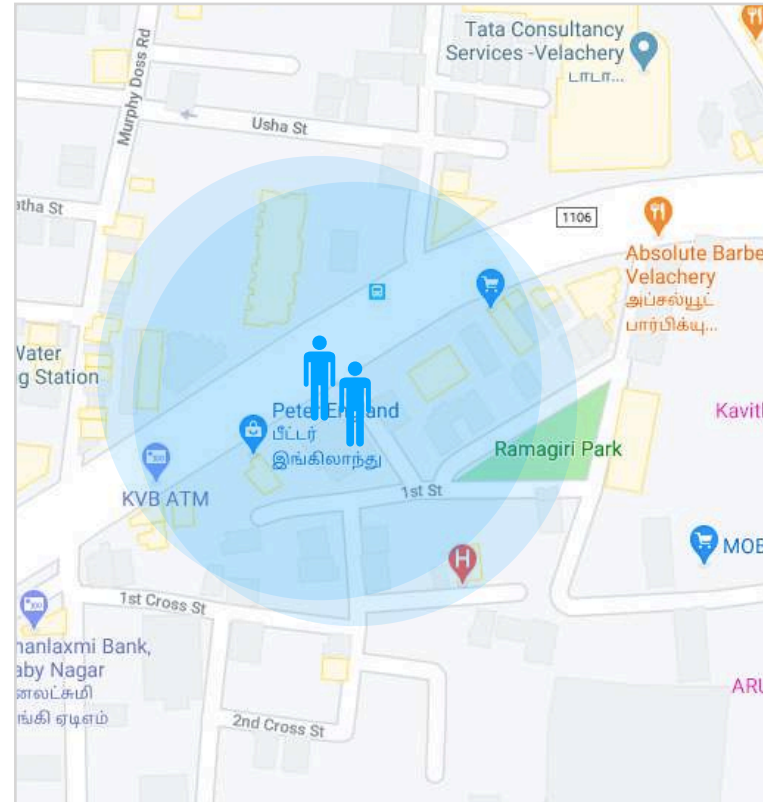

Location History

Using location tracking the app will be updating the location checkins.

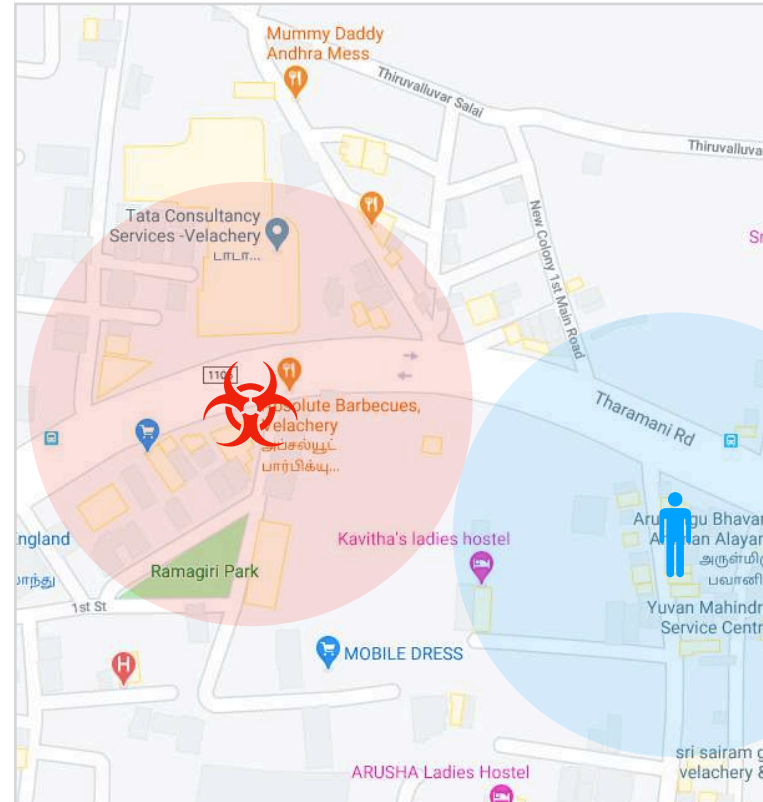

Proximity Person Details

App updates with the details of person who uses the same app in the proximity range .

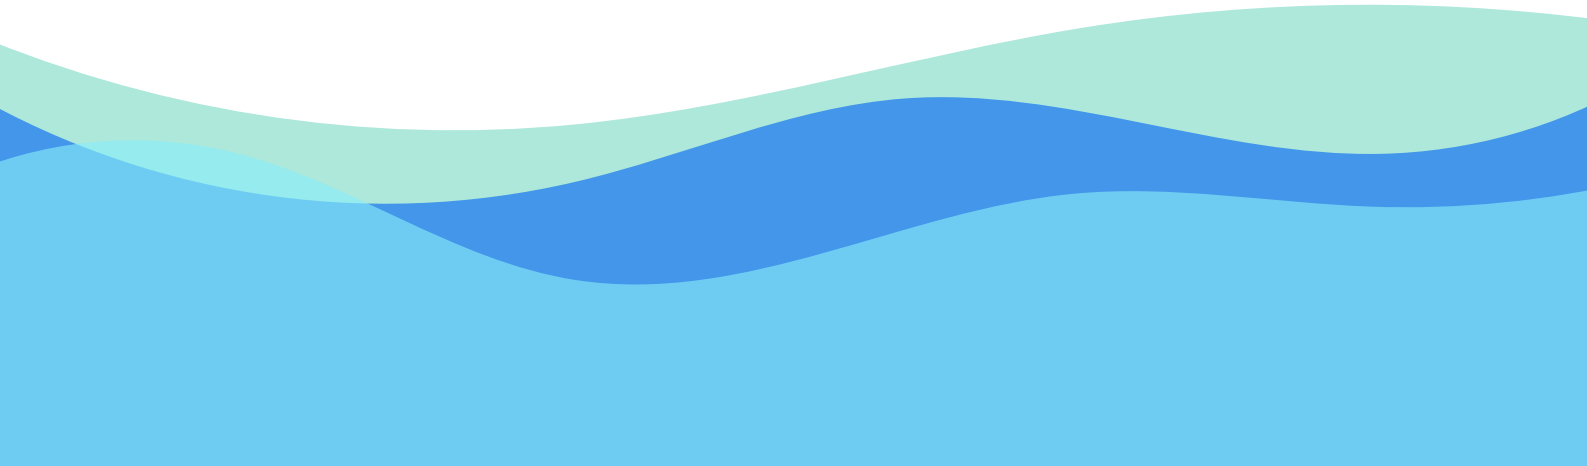

Emergency Alert

In-case the person is infected, he can update in the app. An alert notification will be sent to the users who have been in the range of the infected person travelled.

Values for Government

Values for Government

- Officials can be easily figure out the people who are suspected or affected by Covid 19.
- Easy way of fencing people who are been affected.
- Datas from the user app will be used to trace people and infected locations.

User Features

The background of the slide features a decorative design of overlapping, wavy shapes. The bottom portion is a solid light blue. Above this, there is a darker blue wavy shape, and further up, a light green wavy shape. The top of the slide is plain white.

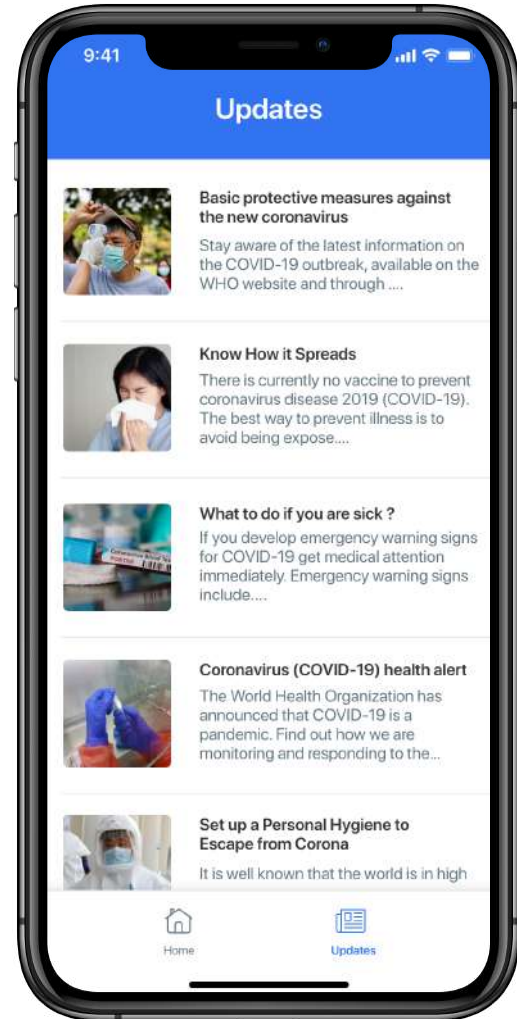

Data Security

- User tracking data will be secured until the user is affected by Covid-19.
- If he/she is affected will be quarantined, data from app will be accessed by officials to trace the infected locations and people.

Fast Aid

- The alert from app will helps the user to get quick attention from the health care officials .
- He/She will be tracked immediately and action will be taken to control Covid 19.
